

# Executive Summary

September 10, 2024

## Introduction

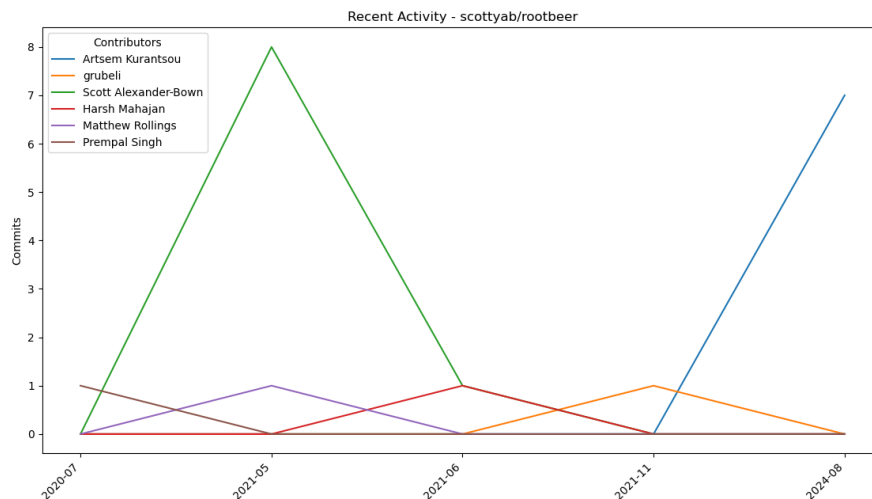

This report summarizes the current status of the Scottyab/Rootbeer project, highlighting workload distribution, key contributors, and recent trends.

Fork Repository: <https://github.com/imawful/Main>

## Workload Overview

- **Total Commits: 198**
- **Active Developers: 14** *from last 40 commits*
- **Top Contributors: Scott Alexander-Brown, Artsem Kuransou**
- **Possible Departures: Matthew Rollings**

## Key Contributors and Recent Trends

- **Scott Alexander-Brown:** The original creator of the project, and still the driving force behind updates. Done a good job at maintaining the quality of 'Rootbeer'.
- **Artsem Kuransou:** Has been the most recent developer working on the project, primarily involved in bug fixes. Artsem has done a good job at ensuring stability of 'Rootbeer'.
- **Matthew Rollings:** Originally a key contributor to the project but has since reduced contribution in recent work done in the repository. Matthew was responsible for managing the project and introducing new features throughout the history of 'Rootbeer'. But as of lately their activity has declined.

## Conclusion

The project is progressing well, with significant contributions from Scott and Artsem as they work to keep the project stable for future devices. Matthew's reduced activity may need addressing. The attached chart highlights recent work activity.

- `git log` - Retrieve commit history
- `git shortlog -s -n` - Summarize contributions by author
- `git log --author="author"` - Track individual developer activity
