scottyab/rootbeer Executive Summary

The RootBeer repository, which boasts 34+ source files and 182 files in totality, has received renovations from 33+ contributors. The first commit was made on June 19th, 2015, while the most recent was on August 5th, 2024. And over this time period, the file that received the most changes was the RootBeer.java file, which was changed 53 times.

Of the 33+ contributors towards the source files, the person who has worked on RootBeer the most is Matthew Rollings, who made 83 changes to source files. Scott Alexander-Bown, who made 71 changes to files, the earliest being June of 2015 and the latest contribution dating June of 2021, is also another main contributor towards RootBeer.

Aside from changes made in the past few weeks, there has been little to no contributions towards the source files of RootBeer in the past few years. In fact, between December 2021 and July 2024, there were 0 changes towards any source file. However, there have been 14 files touched since August 4th of 2024, with the vast majority of contributions being made from Artsem Kurantsou.

A developer who could have been left off the project would be grubeli, who has only changed one file, being the CheckForRootWorker.kt file on November 16, 2021. However, they are not the only person to have only worked on a single file. Others include Ali Waseem, Leon.Karabchevsky, vyas, aippisch, and leocadiotine.

A Git command that was particularly useful in finding this information was "git log", which lists the commits made in that repository. Another useful command was "--stat", which lists how many and which files were changed in a commit.
